Introduction

Barangay 872 is a community located in the Pandacan district in Manila. With a population of 1,864 (2020), the barangay is a diverse and dynamic hub that provides a wide range of services. That said, the barangay is open to enhancing its services and improving communication between its officials and constituents.

To aid in this goal, our group has been tasked with creating a functional website for easy communication and access to various services. The website will include a photo of the barangay hall and a community description. The website will also include directions to the barangay hall and heritage sites within the area and the means of transportation to reach them.

The website's main purpose will be to provide a convenient and efficient way to process a document which includes barangay certificates of residency. For users to have access, users will be able to register and login to the website and only then will they be able to request and process documents online. Additionally, the website will allow users to ask for information related to the processing of documents to ensure that the process is as smooth as possible.

With the adoption of a functional website, the barangay may enhance its services and improve communication with its constituents while also providing a more efficient and accessible means of accessing important documents.

Problem Statement & Objectives

Improving the services of a barangay, such as accessibility, document processing, citizen profile, and information, exceedingly helps establish active communication between the barangay officials and its inhabitants. Integrating such improvement into a web system can enable convenient and accelerated transactions for the members of the barangay.

In a web page, navigating through the web pages of a website can exceedingly affect the user experience of the entire website. Adding too many layers of navigation can reduce the confidence and certainty of the user in utilizing the features of the web pages as well as interacting with the content of the website.

This project aims to create a dynamic website for **Barangay 872, Pandacan, Manila, Metro Manila**, as a means to acquire greater visibility to an expansive audience providing lower operational cost. Additionally, the website will accommodate an organized method for users to uniformly interact with each of the features of the web pages, such as barangay directory, document processes and procedures, and contact details of the barangay officials. Likewise, this project will be developed throughout the term and is projected to be accomplished in the eleventh (11th) week of the current term.

UN SDGs Addressed

SDG 3: Good Health and Well-being - By providing online services, people can reduce their risk of exposure to infectious diseases and maintain good health. In the context of applying for documents, online services can help reduce the need for people to physically go to government offices, which can reduce their risk of exposure to infectious diseases, especially during a pandemic. This can help promote good health and well-being for both the citizens and government personnel.

SDG 9: Industry, Innovation, and Infrastructure - Online services can help improve infrastructure and promote innovation by providing access to new technologies and services. In the context of applying for documents, a dynamic website can provide citizens with an easy and convenient way to access government services. This can help reduce bureaucracy and increase efficiency in government services. Moreover, by providing an online platform, the government can also create an ecosystem for digital innovation and startups, which can help promote economic growth and job creation.

SDG 16: Peace, Justice, and Strong Institutions - Online services can help promote transparency and accountability in government institutions and reduce corruption and bureaucracy. By providing an online platform for citizens to access government services, the government can increase transparency and accountability in delivering these services. It can also reduce corruption by eliminating the need for citizens to interact with government officials in person, reducing the potential for bribery and other corrupt practices. Furthermore, by reducing bureaucracy, the government can promote efficiency in the delivery of services, which can help build trust in government institutions and promote peace and justice.

Scope of the Project

HyperText Markup Language (HTML) will be utilized in creating the web pages for the content of this project. PHP will also be embedded into the HTML as it is well suited for developing dynamic and interactive web pages. The barangay management information aspect of the project includes the necessary tools and interface for the user to conveniently navigate through and easily use each content of the web pages. Such features and aspects include the login attribute, where the user can access and interact with the web pages, barangay directory, which contains all addresses of the barangay, document processes and procedures, and the contact information page.

Functional/ Non-functional Requirements

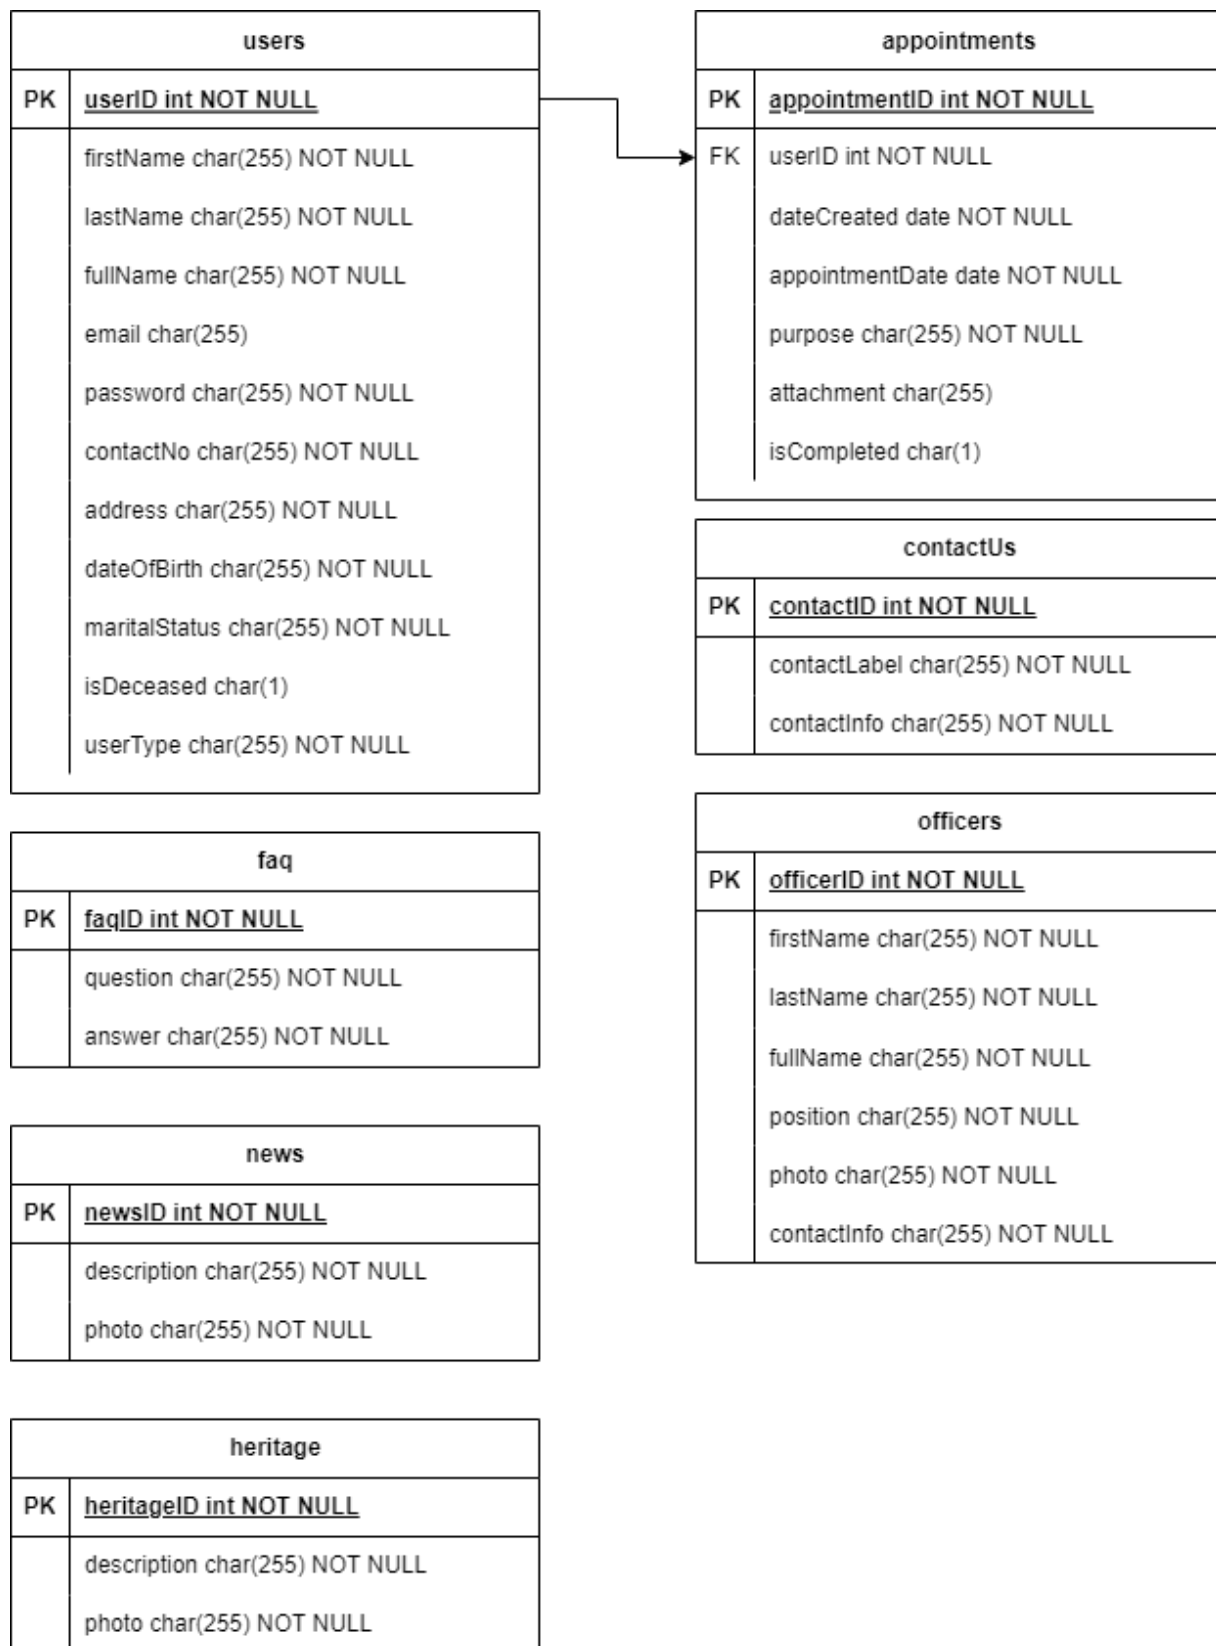

Name	Description
<i>Functional Requirements</i>	
Create Account	This function allows the user to create an account. Users will input the following

	<p>details:</p> <ul style="list-style-type: none"> - First Name - Last Name - Email - Password - Contact Number - Address
Login	<p>This function allows the user to log in to their accounts using their email and password from the previous function. The admin privilege will depend on the email of the user. If it is the business email, it will have admin privileges.</p>
FAQ page	<p>This function provides information to the users about the barangay. It will contain frequently asked questions about the area, such as the barangay hall's location, famous heritage sites, means of transportation, office hours, and more.</p>
Book Appointment	<p>This function allows the user to schedule an appointment to the barangay. The user will input the date and remarks of their appointment.</p>
Appointment Calendar (Admin)	<p>This function allows the admin to view the booked appointments made by the users in a calendar form.</p>
Document Request	<p>This function allows the user to request a document from the barangay. It includes:</p>

	<ul style="list-style-type: none"> - Barangay Clearance - Business Permit - Certificate of Residency - Barangay ID
Document Preparation	<p>This function allows the user to submit the specific requirements for their requested document. The requirements may vary depending on the document requested, but the common ones are:</p> <ul style="list-style-type: none"> - Valid ID - Request Form (Included in the Document Request Function) - Barangay Clearance <p>The users may submit these requirements in .png or pdf format.</p>
Notification System	<p>This function notifies the user if their submitted requirements are verified and approved by the barangay staff. It will also notify the user if their requested document is ready for pickup.</p>
Contact Barangay	<p>This function allows the user to contact barangay officials via email, SMS, or other messaging platforms.</p>
Non-Functional Requirements	
Name	Description
Usability	<p>The website will utilize a user-friendly interface that is easy to navigate and</p>

	convenient.
Reliability	The implementing system can accommodate the needs of the user.
Security	The system, along with its data are protected against unauthorized access.
Maintainability	The system can create, read, update, and delete contents by an authorized user.
Compatibility	Different browsers and devices can support and navigate web pages without disorganization.
Compliance	All web pages follow the World Wide Web Consortium (W3C) protocols and guidelines.
Appearance	The website will be designed according to the community's heritage and background.

Database Design (ERD)

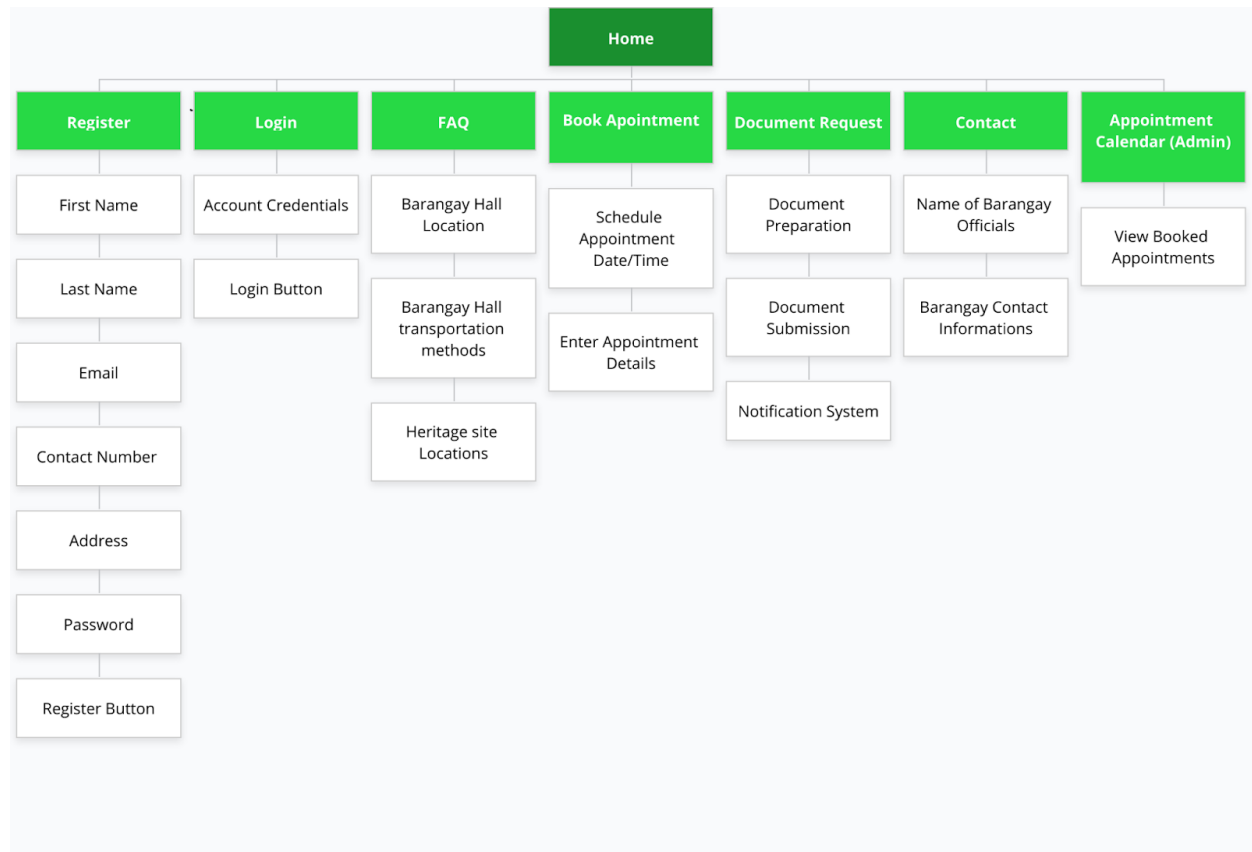

The users table will contain the following fields: first name, last name, full name (which will be filled in programmatically by appending first name and last name together), email address, password, contact number, address, date of birth, marital status, whether or not this person is deceased, and user type (user or admin). If the isDeceased field is null, then it means that it is false. The email field does not have the “not null” attribute because not everyone in the barangay is expected to have an email address (such as elders). The appointments table will have userID as a foreign key so that we know which user created this appointment, the date when the appointment was created, when the appointment is going to be, its purpose, attachment for requirements such as a valid id if any, and whether or not the appointment is already completed. If this field is null, that means that it is still ongoing. The contactUs table will contain contact labels whether it be facebook, email, cell phone number, and contact info which will contain the facebook link, email address, etc. The faq table will contain the question and the answer to the question. The officers table will contain the first name and last name of the officer, their full name which will be programmatically filled, their position, photo, and contact info. The news and heritage tables will contain two rows: description and photo.

Features of the System

1. View Barangay Information
 - a. Barangay hall Description
 - b. Barangay hall Location
 - c. Barangay hall Directions
 - d. Heritage Sites Location
2. Register
3. Login
4. View Frequently Asked Questions
5. Book Appointment
6. Request document

7. Submit document requirements
8. View Booked Appointments
9. View Barangay Contact information

Site Map

Description:

Home: This page serves as the website's main landing page. It contains essential information about the barangay and includes promotions and other needs. This is where all of the main pages reside and is the first page the user will see

Register: This page allows residents to create an account on the website. They can use this account to access specific services such as booking appointments, requesting documents, and receiving notifications.

Login: This page allows residents to log in to their accounts and access the website's services.

FAQ Page: This page answers frequently asked questions about the barangay's services and processes. This also contains directions to the barangay hall and locations of heritage sites

Book Appointment: This page allows residents to book an appointment for services such as interviews, business permits, and other similar transactions. The resident will enter their appointment date and time, Purpose of appointment and remarks. The available dates for appointment can also be seen here.

Appointment Calendar (Admin): This page is for the barangay's administrative staff, where they can view appointments booked by residents. This page is exclusive to the Admin only. They can see the booked details of the users in table format. There will also be a calendar indicating what dates are booked.

Document Request: This page allows residents to request documents such as Barangay Clearance, Business Permit, Certificate of Residency And Barangay ID. The user will hover the request document tab on the homepage and a drop down menu will appear with all of the documents to be requested. The user will select from the dropdown menu and will be directed to the Document Preparation page to submit requirements needed in the selected document.

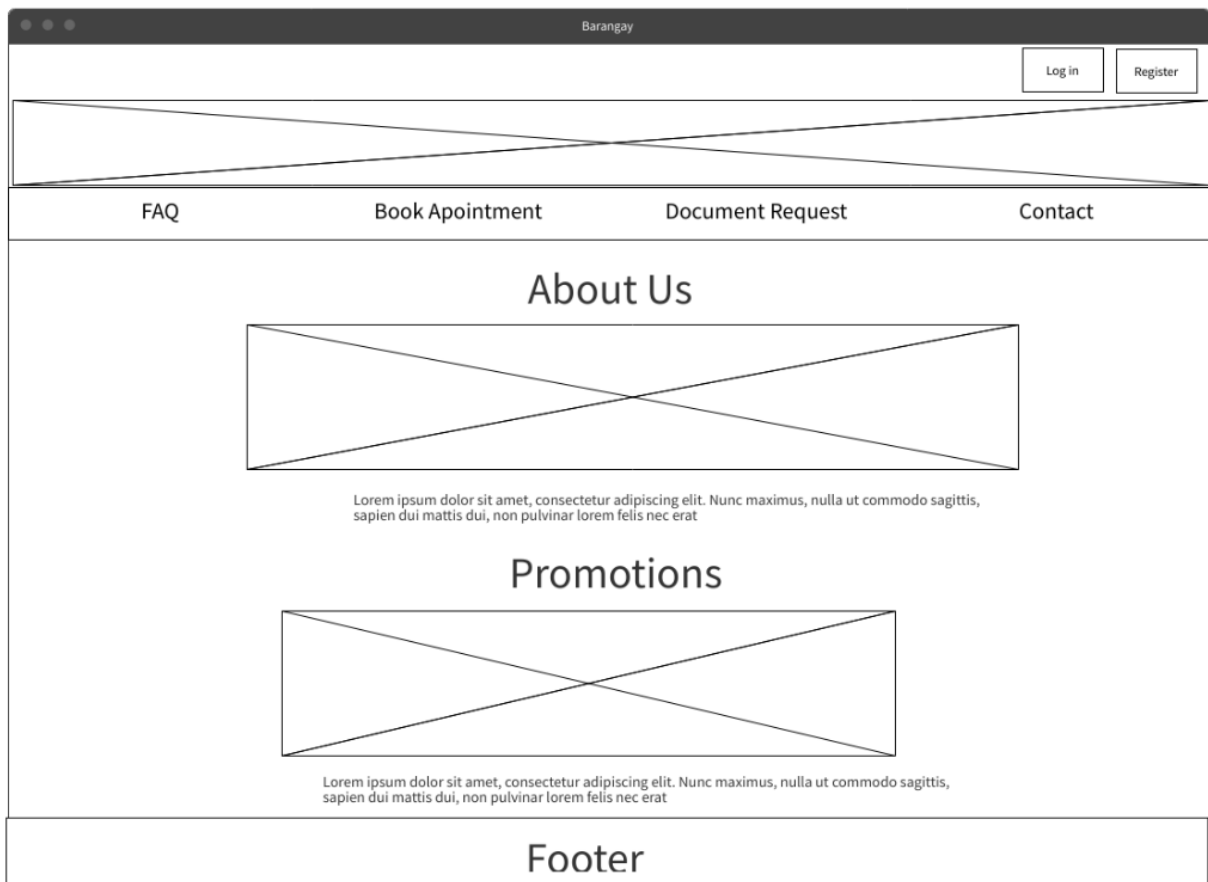

Document Preparation: This page contains information about the requirements and procedures for preparing necessary documents such as Valid ID, Request Form (Included in the Document Request Function), and Barangay Clearance. After completing the requirements the user can submit the documents and will be sent to the barangay. The notification system will take place after submission.

Notification System: This page allows the barangay to send notifications to residents who have registered on the website. These notifications will inform the residents that their document is ready via Email or SMS

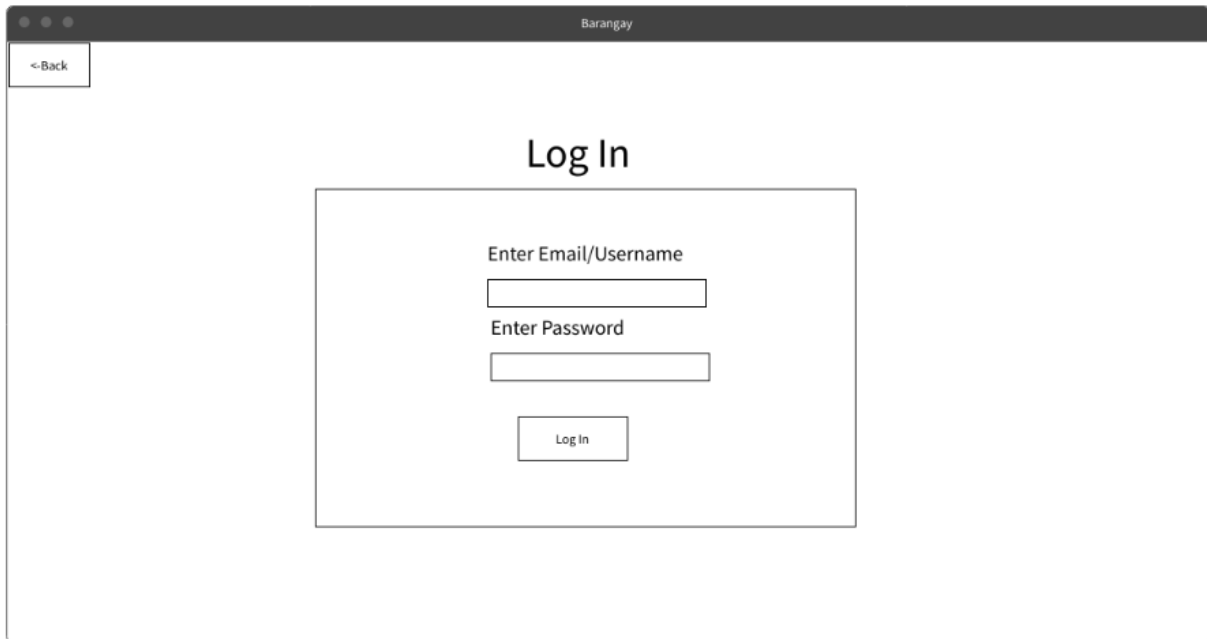

Contact: This page provides residents with various means of contacting the barangay's officials, including phone numbers, email addresses and etc.

Wireframes

Home Page

Login Page

A mockup of a login page within a web browser window. The browser's title bar is dark gray and contains the text "Barangay" on the right and three window control buttons on the left. In the top-left corner of the page content, there is a small button labeled "<-Back". The main content area is white and features a centered "Log In" heading. Below the heading is a light gray rectangular box containing the login form. The form consists of two text input fields: the first is labeled "Enter Email/Username" and the second is labeled "Enter Password". Below these fields is a "Log In" button.

Communication Letter with the Client of Choice

Dear Barangay Chairman,

We are currently undertaking the course Web Systems and Technologies 2 Laboratory (IT135-8L), which requires us to create a website for a government organization. We have carefully selected your esteemed organization as our client for this project and would like to offer our expertise in creating an e-commerce website that meets your needs.

I am writing to express our intention to create a dynamic website for Barangay 872. Our group believes that providing online services can help promote accessibility, efficiency, and transparency in the delivery of government services. Specifically, we would like to create a website that enables citizens to apply for barangay documents online, reducing the need for them to physically go to the barangay hall. This can help promote good health and well-being by reducing the risk of exposure to infectious diseases.

Moreover, a dynamic website can help promote innovation and economic growth by providing access to new technologies and services. By creating an online platform, we can also create an ecosystem for digital innovation and startups, which can help promote job creation and economic development.

We are committed to working closely with your barangay to ensure that the website meets the needs and requirements of your constituents. We believe that this project can help promote transparency and accountability in the delivery of government services, and we are excited to partner with your barangay to make this project a reality.

Thank you for considering our proposal. We look forward to hearing from you soon.

Sincerely,

Rosario, Cloe A.

The View Appointment function allows the admin to view the appointments made by the users in a calendar view. If the admin clicked on an appointment, a modal view with more details of the appointment will appear. Additionally, there is a delete button where the admin can delete the appointment in the calendar view and

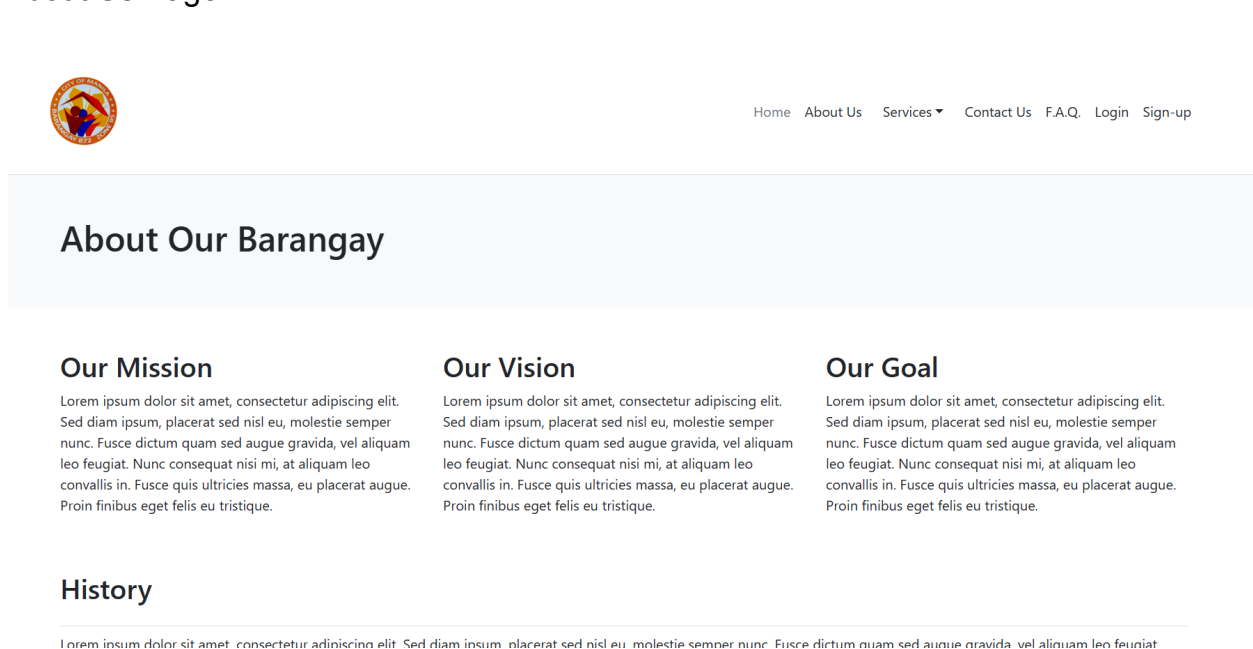

the system's database. The admin can confirm or reject the appointment by sending an email or message via their contact details.
